### Trustworthy Design Methods

#### Modelling of Trustworthy Requirements

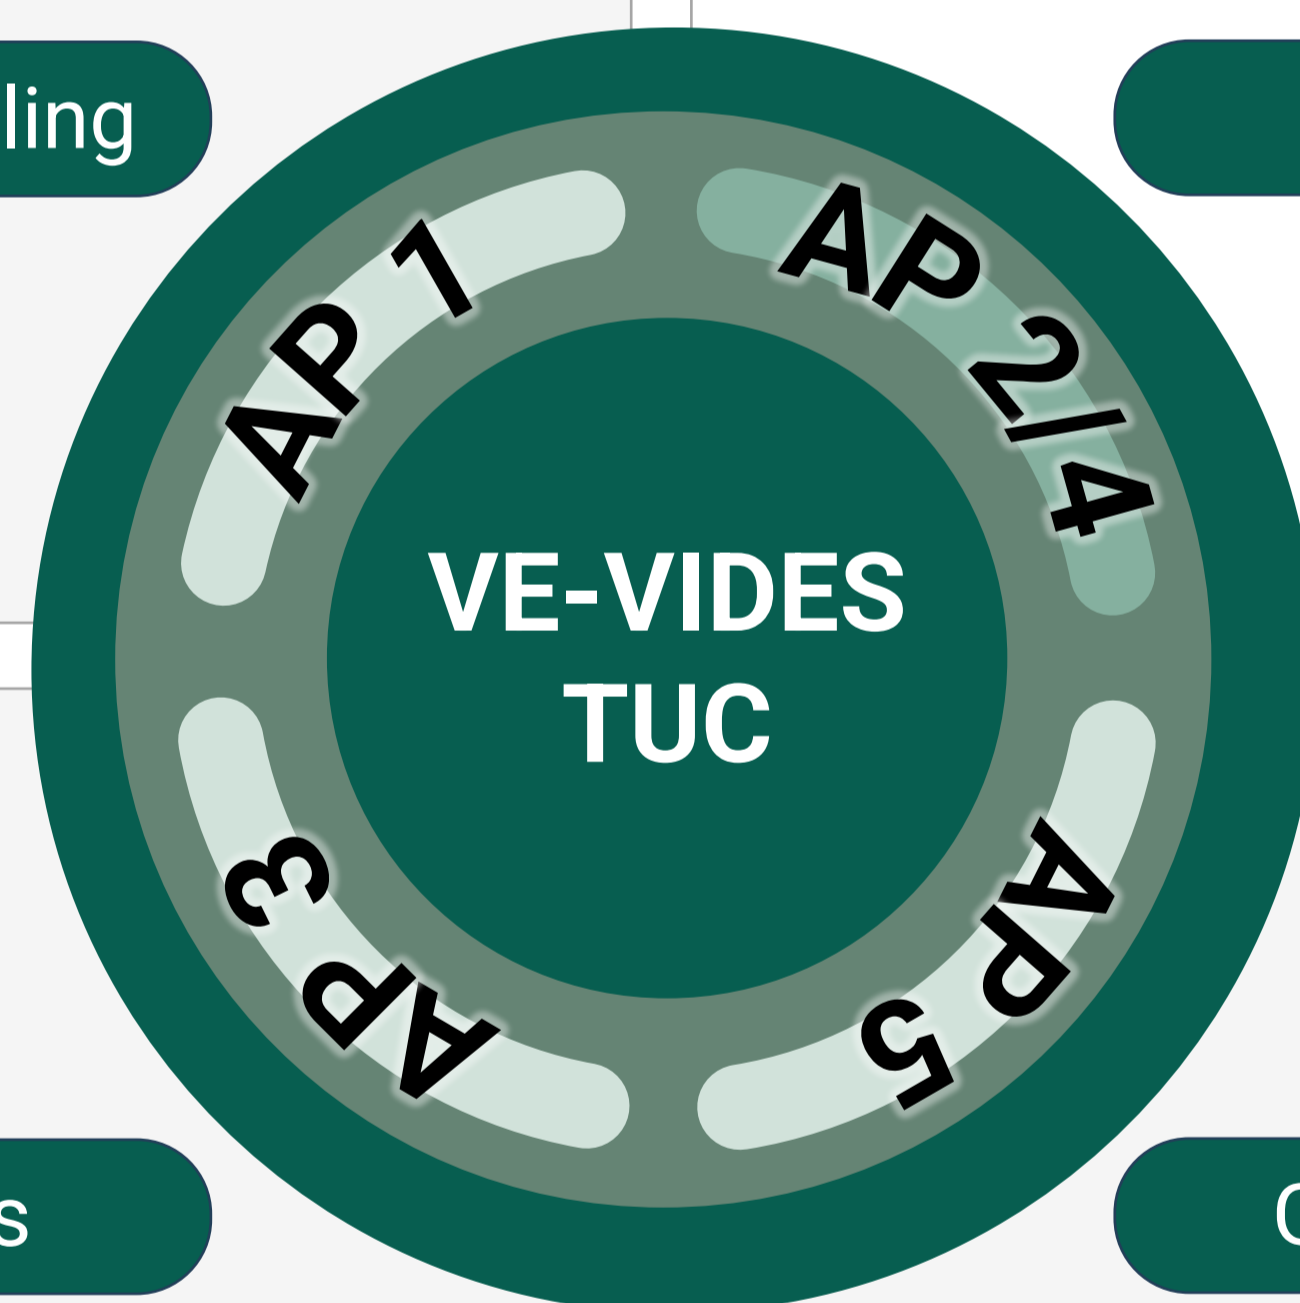

- Formulation of concerns describing certain threats/hazards
- Part of common specification and its requirements
- Concerns are solved by trustworthy entities and its components
- Integrated in an in-house requirements engineering tool *SpecScribe*

Trustworthy Requirements

Concern Modelling

Specification

ITL

HW-Monitors

High Level Synthesis

Physical Unclonable Function

FPGA

MEMS

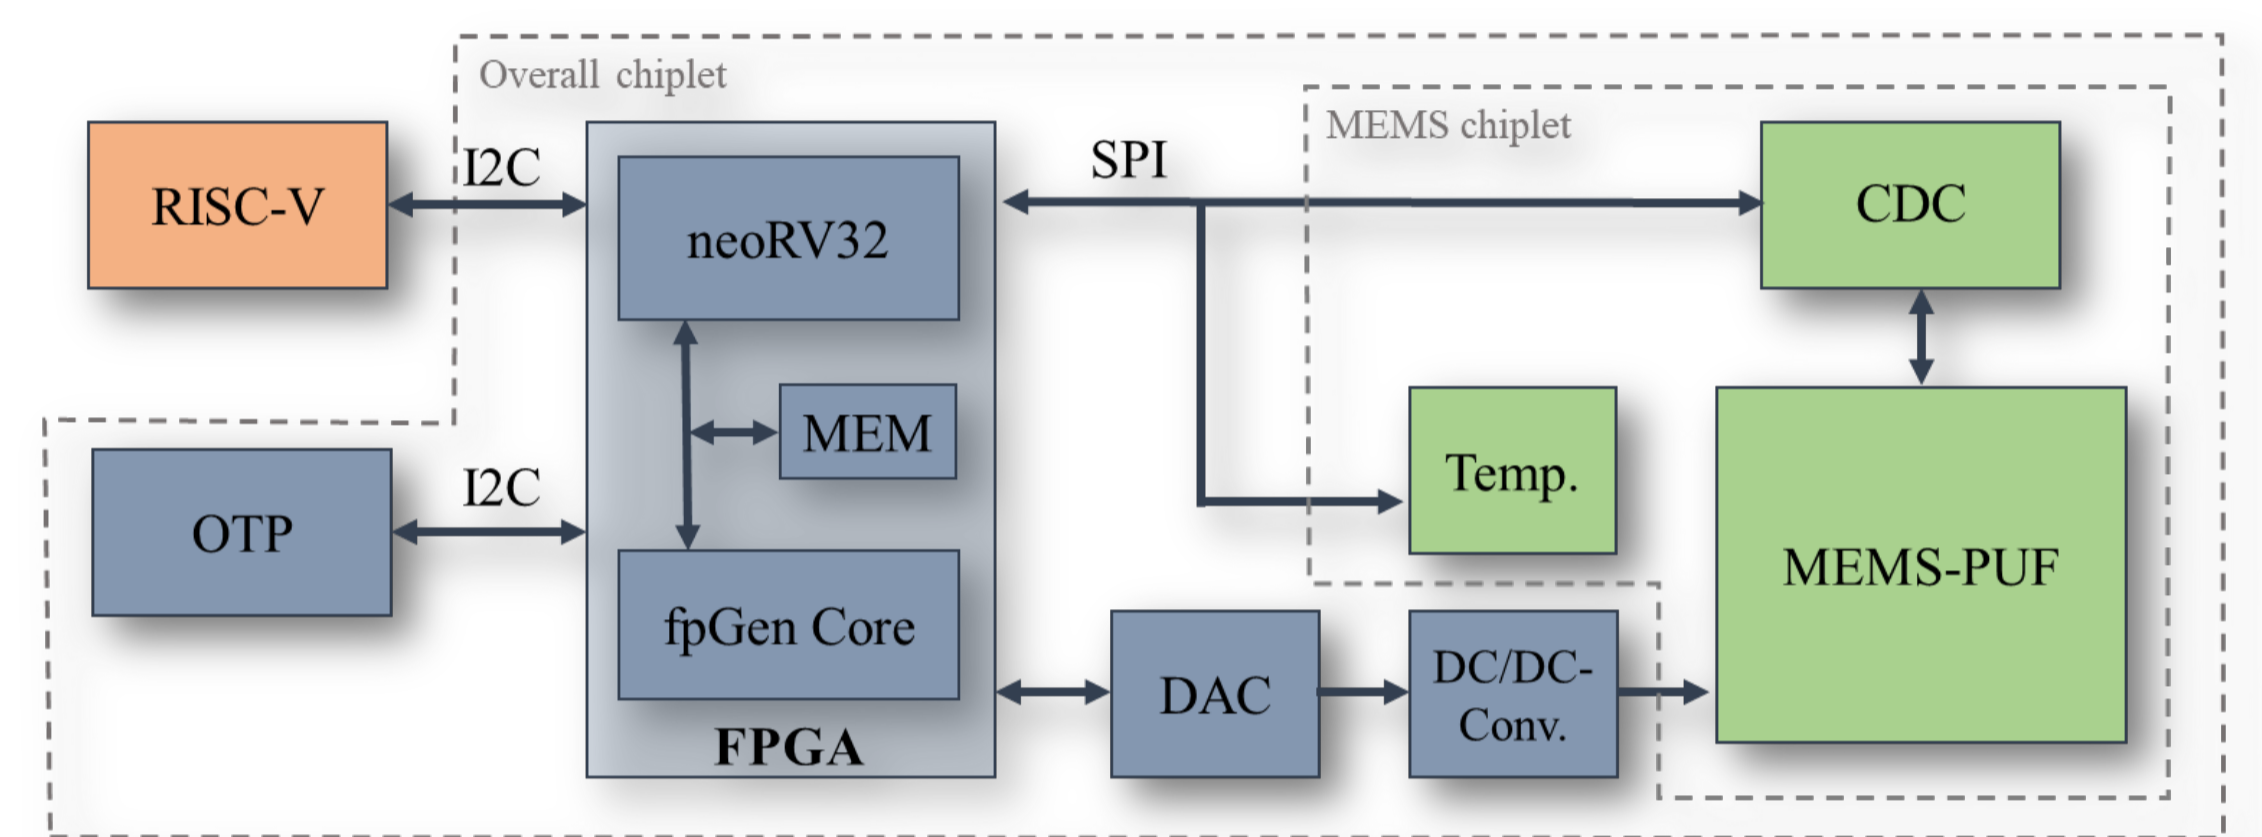

ReqIF

Generalization

Interchangeability

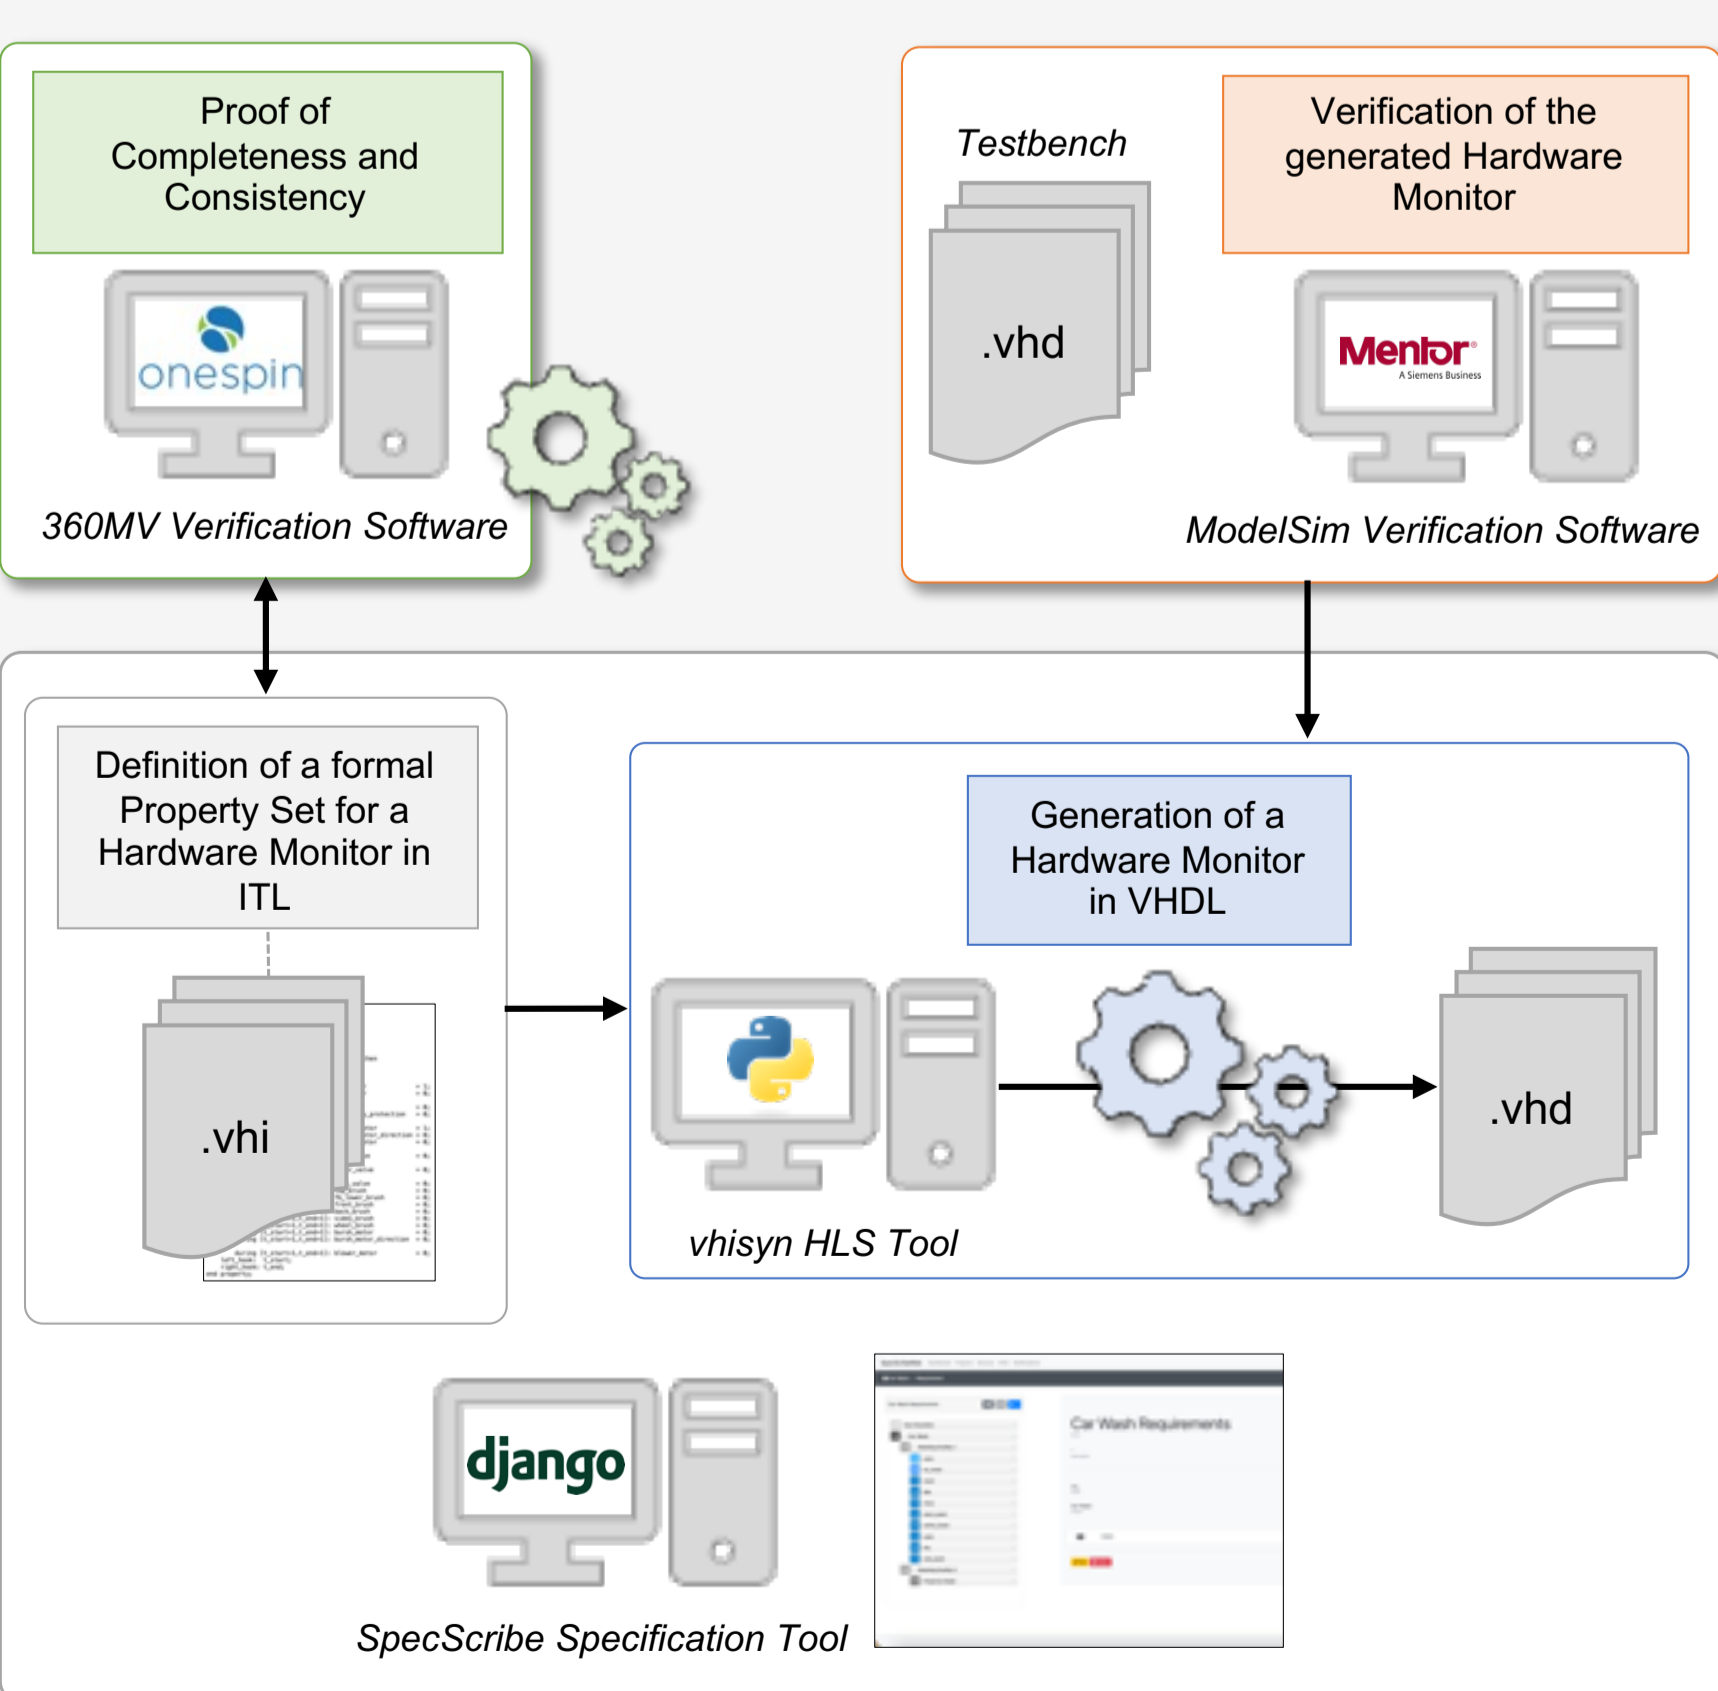

### MEMS-based Fingerprinting Architecture

- Micro-Electro-Mechanical System (MEMS) as physical unclonable function (PUF): MEMS varactor array
- Fingerprint calculation and evaluation in FPGA with hashed key
- Challenge-Response method
- 64 Bit Fingerprint

### Formal Properties for Hardware Monitors

- Formal specification of hardware designs using InTerval Language (ITL)
- Application field in project: Hardware Monitors for trustworthy designs
- Proof-of-concept HLS flow
- Generating hardware monitors for Fingerprinting FPGA implementation

1. Specification in tool *SpecScribe*
2. Formal proof of completeness and consistency using *OneSpin 360MV*
3. Synthesis using in-house HLS tool *vhisyn*

### Formal Modelling of Workflows and Checklists

- Generalization for different fields of application
- Dedicated ReqIF model for objects, activities, relations and results
- Implementation in tool *SpecScribe*

- Goal: individual workflows and checklists formal and interchangeable amongst all partners within the product development lifecycle
